

CFE Capital announces the quarterly distribution of the CFE FIBRA E corresponding to the 1Q22. The distribution will be \$0.597 Mexican Pesos per Fiduciary Stock Certificate for Series A (FCFE18) and Series B (FCFE18-2) of CFE FIBRA E.

Mexico City, Mexico March 18th, 2022.- CFE Capital, S. DE R.L. DE C.V., manager of CFE FIBRA E, first energy and infrastructure investment trust specialized in the energy sector in Mexico, reports the following to its investors:

The year 2021 was marked by the advance in the economic reactivation of the country, however, the economic indicators are far from reaching the levels registered before the pandemic, due to the rebound in positive cases of COVID, after the appearance of the Ómicron variant, the gradual progress in the vaccination campaign, coupled with a volatility framework in the financial markets, mirrored in an increase of the interest rates as a response from the central banks to contain inflation.

As of February 2022, the geopolitical conflict between Russia and Ukraine increased economic tension at a global level, harming inflation and financial conditions in a framework of severe challenges.

Despite the complex macroeconomic outlook, the performance of CFE Capital and Fibra E was stable and displayed solid resilience as an investment instrument by upholding an average price of \$27.95 throughout the year, which meant a steady increase of 47% since its IPO price in 2018.

Compared to their peers, the CFE FIBRA E certificates have maintained a positive yield, and a stable dividend payment, displaying the profitability of the transmission sector and its solvency in expected cash flows. The annual dividends yield of the Fibra E throughout 2021 was 11.92%, a yield above its peers, which was established in a range between 4% and 8%. This record strengthens the long-term demand which is looking for a profitable “buy and hold” instrument with conditions comparable to a debt instrument.

The distribution collection period for the 1st Quarter of 2022 comprises 13 weeks of operation -corresponding to December 2021, January, and February 2022- and considers a total distribution of \$0.597 MXN/CBFE for Series A (FCFE18) and Series B (FCFE18-2).

The total amount to be distributed among the holders amounts to \$679,220,699 MXN, proven in a distribution of \$0.597 MXN for each CBFE for Series A (FCF18) and Series B (FCFE18-2). For both series, \$0.048 MXN correspond to tax result, and \$0.549 MXN to capital reimbursement. The purpose of the stated composition is to ensure the compliance with CFE FIBRA E regime, sustaining its tax benefits.

This distribution reasserts that CFE Fibra E adds up competitive advantages which makes it more appealing than its peers. The return for each certificate is above the industry, flow distribution is constant, the asset which the financial instrument is stowed has no competitors in the market and has been defensive due to the resilience displayed in complex frameworks, and ultimately, the industry has growth expectations.

For additional information, a note with the most outstanding elements of the distribution will be published on the CFECapital website.
